PRESS RELEASE

« Rentaload, leader in load banks rental & commissioning solutions provider for data centers in Europe »

Rentaload provides *(in addition to rental of loadbanks and accessories)* commissioning solutions for datacentres, from pre-functional testing and start-up, to functional performance testing and Integrated System Testing (IST) – (Level 3 to Level 5 testing), in France and throughout Europe.

HOW ?

Thanks to its range of SMART and connected load banks, from 0.5 kW to several MW :

- 6 kW/7 kW rack-mounted load banks acting as true server simulators ;
- 21 kW floor load banks with integrated ATS and low Delta T ;
- 100/200/300 kW Low Delta T load banks for large IT rooms and white spaces

The SMART & connected function of our equipment allows you to control a whole fleet of load banks remotely via a single supervision PC. You will also be able to send them instructions and collect extremely precise data during your tests (P/U/I/ Delta T), which will allow you to :

- **Save time** in the realization of your tests (up to 20% according to our customers) thanks to the remote control ;
- **Add value** to your tests with the data collected during the tests.

A RANGE OF SERVICES ASSOCIATED WITH THE RENTAL OF OUR LOAD BANKS :

We offer a full range of services for datacentres, such as :

- Installation and de-installation of the load banks on site,
- Connection,
- Assistance in carrying out your tests or the complete commissioning service (elaboration of the test protocol, realization of the tests on site, writing of the final test report).

« The importance of testing today for datacentres »

A datacentre must operate optimally 24 hours a day. If a breakdown occurs or if the owner of the building encounters problems or malfunctions on certain equipment, this can be dramatic and costly in unforeseen downtime.

It is therefore necessary to ensure that both the electrical chain and the cooling system *(*)* work correctly as specified and this is done through load tests. In some countries this is a mandatory requirement prior to go-live.

(*) These two elements are essential for a datacentre to function

With our SMART equipment and connected solutions we guarantee **reliable and optimised testing** for your datacentre. With the collected data and reports we provide, gives **irrefutable proof** of the safety and efficiency of your infrastructure.

RENTALOAD - The assurance of an operational and efficient datacentre!
